

## **Long text not working after upgrade to EHP 7**

### **DETAILS**

## Description

There may be an issue with updating long text in some SAP transactions after upgrading to SAP ECC 6 Enhancement Pack 7 or 8

After upgrading to enhancement package 7 or 8 of ERP6 you are not able to update or enter long text.

## Applies to

SAP ECC 6 with EHP7 or EHP8

## Cause

The control data used in the automation queue for rendering on SAPGUI is handled differently in EHP7 /EHP8 than in previous releases. This led to inconsistency on EHP7 /EHP8 when using the longstanding way of recording and running these t-codes.

So due to internal SAP changes with record and run in effect tcodes, long text could not be entered or updated.

## Solution

The fix for these t-codes has been added in the Winshuttle Function Module (WFM).

1. Upgrade to 20.2.8 WFM
2. On WFM 20.2.8 import transports EH7K900099.
3. Use t-code SM30 to add the affected t-codes in the table /WINSHTLQ/TRCTAB.

Example values:

LTEXT VA01 0 3

LTEXT VA02 0 3

4. Re-record the scripts in WFM mode.

These t-codes may be affected - CO02, FB02, IW21, IW31, IW32, IW36, ME21N, ME22N, VA01, VA02, MM01, MM02.
