This section describes the output fields that are returned for each Property Attributes dataset. For more details and for highlighted field names, refer to the Excel® spreadsheet that is provided with your Property Attributes dataset download.

### Duplicate Data Handling

Addresses with duplicate pbKey values are delivered in a separate tab delimited file. The layout is the same as the main file and can be searched by the pbKey. The record that is identified as the Survivor record is in both versions of the data; it is the record in the duplicate group with the highest property value.
